

Concentrates' Top 25 Natural Soil Amendments

Concentrates All-Purpose Natural 5-5-3, Stutzman's 4-3-2 & 8-2-4 , Nature's Safe 8-5-5, Par4 9-3-7 25# - 50# bags. Excellent premixed fertilizers. Easy to use, with great results! The 5-5-3, 4-3-2, & 8-5-5 are all-purpose, for vegetables, fruits, and landscapes.
The 9-3-4, & 8-2-4 are great for lawns, shrubs, trees, and perennials.

Alfalfa Meal & Pellets (2.5 - 0 - 0) 40# - 50# bag

Roses love Alfalfa meal/pellets! It is also good fertilizer for most other plants & lawns. It adds a little nitrogen, some vitamins & minerals, and organic matter into the soil. Organic matter added to the soil feeds micro organisms who in turn feed plants roots, and create spaces in the soil for air & water. (Adding organic matter to soil leads to less compacted, less clay, and less acidic soils!

Bone Meal (3 - 15 - 0) Ground or Granular 50# bag

Bone meal has been used as fertilizer for hundreds if not thousands of years, and it is an excellent fertilizer. It offers a bit of Nitrogen, and a lot of Phosphorus, which your flowers, fruits, and vegetables will love! (Comes in Ground or Granular)

Blood Meal (13 - 0 - 0) 50# bag

Blood meal is higher in Nitrogen than any of the other natural soil amendments. It will stimulate rapid growth of leaves, branches, and shoots. It will green up grass and promote tree growth. It may also repel deer and moles. (Feather meal is the next highest Nitrogen rich natural fertilizer.)

Seed Meals (Linseed Meal 6-0-0, Cottonseed Meal 5-2-1, Canola Meal 6-0-0, Soybean Meal 9-0-0) 50# bag

This is a time-tested natural fertilizer. Cottonseed Meal is slightly acidic, so it makes a great fertilizer for Rhodies, Azaleas, Camellias, and Blueberries. Linseed Meal is a great Nitrogen fertilizer for all plants, and it is not GMO.

Chicken Manure (3-2-2 Composted or 4-3-2 Pelletized or Granulated, 8-2-4 Gran.)

Our Chicken manure is an excellent well balanced natural fertilizer. It is available in: 1 cf composted, 50# pelletized, or 40# granular.

Corn Gluten Meal (10 - 0 - 0) 50# bag

Some say Corn Gluten Meal works like a natural Weed & Feed. It may suppress weed seed germination, and it fertilizes established plants. It is a great lawn fertilizer. One 50# bag will cover approximately 2,500 sq.ft. (Do not use anywhere that you actually want to grow from seed!)

Diatomaceous Earth 1#, 5#, 10# & 50# bags

It is used for natural insect control. It is chemically inert and harmless, but it shouldn't be inhaled. It won't harm people or animals (unless inhaled), but it causes insects to dehydrate & die! Feed and Garden Grade, 1# or 50#.

Feather Meal (12 - 0 - 0) 50# bag Ground or Pelletized

Feather meal is the second highest Nitrogen rich natural fertilizer, and it is relatively economical compared to the other two natural Nitrogen rich fertilizers (Blood & Fish Meals). It works great and has been quite popular. It is not as attractive to animals as Fish or Blood meals can be, either. Ground or Pelletized.

(Continued on next page)

Fish Meal (10 - 4.5 - 0) 50# bag

Plants love fish meal! It has been used as fertilizer forever because it works so well! It is quite high in nitrogen, and adds some phosphorus, too. Its pretty smelly, but the plants don't seem to care. (Occasionally dogs and cats have been attracted to it.)

Fish Bone Meal (4 - 20 - 0) 50# bag

This adds **a lot** of Phosphorus and a bit of Nitrogen, too. This is the most Phosphorus rich natural fertilizer.

Glacial Rock Dust, Basalt Rock Dust, Azomite, Redmond Conditioner (0 - 0 - 0 + many TM) Many sizes, powder or granulated. Rock Dust's are chock full of many trace minerals, which will make your flowers more vibrantly colored, and will make fruits and vegetables taste better! These are made of natural ground rock, and they re-mineralize the soil! I never garden without them. Powders and Granulars.

Gypsum (Calcium Sulfate) 40# Powder or 50# & 25# Granular

Gypsum adds calcium & sulfur, both essential plant nutrients, to the soil without altering the soil pH. The best thing about Gypsum is that it will naturally break up clay soils over time! Add it every year and see your soil improve! 40# Powder or 25# Granular.

Kelp Meal (1 - 0 - 3 + TM & Vit's) for 50#

Kelp meal is wonderful fertilizer. It has been used forever and all plants seem to love it. It is a very mild fertilizer that provides a little Potassium, and many Trace Minerals, Vitamins, Growth Hormones, and other interesting natural substances. 50#.

Lime (Calcium Carbonate, Magnesium Carbonate) for 50# pelletized or powder, or 25# pelletized

Lime corrects the pH in Acid soils, which most of us in the Willamette Valley have! We carry several forms of lime that are suitable to your gardens and landscapes. Come on in and let us help you decide what kind of Lime is best for you!

Rock Phosphate (0 - 3 - 0) 50# bag

Rock phosphate (ours is "colloidal" or "soft") adds phosphorus to the soil, which is a necessary plant nutrient. It is natural, slow release, and adds phosphorus without adding animal products, if that is what you wish. Powder or Gr.
